

Launchboom Riliev

The Riliev is a watch version of VIBE technology. The fastest approach for this Launchboom project is to familiarize yourself with the VIBE first. The majority of the benefits from the VIEB transfer to the Riliev.

VIBE

Riliev

The main differences between VIBE and Riliev

1 – Riliev is a watch not a pocket/lanyard device

2 – It doubles as a watch with Apple watch swipe familiarity

3 – Its more of a conversion started “Hey that’s a cool looking watch. Yeah, and it doubles as a therapy device”

4 – Band expansion accessory transfers it into a dog collar

5 – Band expansion accessory transfers it to a Horse band

A smaller version of this:

6 – The Riliev builds on the fastest growing PEMF technology on the market – VIBE (This is most likely true)

7 – Riliev is more fashionable

Start here and work your way down until you have had enough 😊

VIBE Overview

The world's only "Pocket" PEMF device for the most common ailments in people and pets.

Product flyer (now 59 protocols)
